

E. SATHYANESAR

+91-63830-71072 | nesarsathya@gmail.com | linkedin.com/in/sathyanesar | github.com/sathya3103 | Chennai, Tamil Nadu

SUMMARY

Computer Science Engineering student with 3 internships spanning full-stack development, AI & data analytics, and cybersecurity. Delivered 4+ end-to-end projects using Java, Python, React, PostgreSQL, and Machine Learning. IBM-certified with a proven record of building production-ready, version-controlled applications.

EXPERIENCE

AI & Data Analytics Intern

Sep 2025

AICTE — Shell India — Edunet Foundation

- Performed EDA on real-world datasets, uncovering patterns and anomalies for data-driven decisions.
- Built and evaluated ML models using preprocessing pipelines with measurable accuracy gains.

Cybersecurity with Gen AI Intern

Dec 2025

Vodafone Idea Foundation (VOIS) — Edunet / AICTE

- Analyzed 3+ cybersecurity threat models; applied Gen AI for automated anomaly detection.
- Studied authentication protocols, network security architectures, and data protection frameworks.

Full Stack Development Intern

Jun 2026

Digioptimized

- Developed full-stack features across frontend and backend services, streamlining end-to-end data flow.
- Applied Git branching and code review practices, maintaining a clean version-controlled codebase.

PROJECTS

WhatsApp Weather Alert Automation

Python, Automation | github.com/sathya3103/weather_alert_python

- Automated 4-day weather forecast delivery to WhatsApp via OpenWeatherMap API, eliminating manual lookups.
- Multi-layered fallback system achieves near-100% notification reliability.
- Designed a 3-tier delivery pipeline (remote Chrome session, Selenium automation, PyWhatKit fallback), cutting message delivery time to under 3 seconds.

NextBench Marketplace

React, PostgreSQL, REST API | nextbench-app.vercel.app

- Production-deployed full-stack marketplace with end-to-end user flows: browse, auth, and transactions.
- Normalized PostgreSQL schema reduced data redundancy by ~40%; JWT auth secures all user sessions.
- Designed a RESTful API layer connecting the React frontend to backend services, enabling modular, scalable feature development.

AI-Based Network Intrusion Detection System

Python, Random Forest, Streamlit | github.com/sathya3103/AI-Network-Intrusion-Detection-System

- Trained Random Forest classifier to detect malicious vs. benign traffic at ~99% accuracy on simulated data.
- Built Streamlit dashboard for real-time simulation, model training, and live inference.
- Engineered the full ML pipeline (pandas, NumPy, scikit-learn) with confusion-matrix visualization for performance evaluation.

Train Reservation System

JavaFX, MySQL | github.com/sathya3103/TrainReservationSystem

- Desktop reservation app in JavaFX + MySQL for ticket booking
- Optimized SQL queries and indexing
- Implemented JDBC-based connectivity between the Swing GUI and MySQL database, with form-validated ticket booking and confirmation screens.

EDUCATION

B.E. Computer Science Engg.

Agni College of Technology

Expected 2027 CGPA 7.75

Higher Secondary (Class XII)

Brotherhood Matric Hr. Sec. School

2022 – 2023 76.83%

TECHNICAL SKILLS

LANGUAGES

Java · Python · SQL

WEB

HTML5 · CSS3 · JavaScript · React

DATABASES

MySQL · PostgreSQL

AI / ML

Random Forest · EDA · Streamlit

TOOLS

Git · GitHub · VS Code · Figma

CERTIFICATIONS

Responsive Web Design (freeCodeCamp, 2024)

Data Analysis with Python (IBM, 2024)

Machine Learning with Python (IBM, 2025)

Python for Data Science & AI (IBM, 2025)

COMPETITIONS

Hackathon Finalist (Round 2) — St. Joseph's College

- Presented *NextBench*, a student-focused marketplace platform.
- Competed against multiple teams and progressed past the first elimination round based on the strength of the idea, presentation, and feasibility of the solution.
- Delivered a live product demo and technical Q&A to a panel of judges, defending architecture and scalability decisions under time constraints.

Student Mentor — 24-Hr College Hackathon

- Served as a student mentor, guiding & supporting the participating team throughout the event.
- Out of more than 70 competing teams, the team I mentored advanced to the finals.
- Advised on project scoping, technical feasibility, and presentation strategy during a 24-hour build cycle, helping the team prioritize a deliverable MVP.
